Summarize the information by selecting and reporting the main features and make comparisons where relevant.

The pie charts give information about the change in popularity of 6 devices (mobile phone, laptop, tablet, desktop computer, flat-screen TV, and conventional TV) used for viewing television among young Canadians aged 18 to 25 in 2009 and 2019.

Overall, it can be seen that conventional TVs went from being the most used device in 2009 to the least used device in 2019. Over the 10-year period, flat-screen TVs increased in popularity more than any other device and became the most popular choice by 2019.

In 2009, conventional TVs were significantly more popular than any other device, at 34%, while in 2019, the figure collapsed to less than 5%. In contrast, the least popular devices in 2009 were flat screens and tablets, accounting for 8 and 5 percent, however, by 2019 flat screens dominated the viewing preferences at 27 percent, while tablets also increased significantly to 19%.

Desktop computers and laptops commanded a respectable 18 and 20 percent in 2009, but by 2019 they both decreased to 12 %.
